DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows

I. A porous connector between the tank and the fuel cell pertaining to claims 63, 65-68, 71, 72, 74-76.

II. A valve connector between the tank and the fuel cell pertaining to claims 77-86, 144.

III. A discharge tank being connected to a fuel cell and tank system pertaining to claims 73, 87-116.

IV. A detachable fuel tank pertaining to claims 64, 116-143

V. A guide tube connecting the fuel tank and fuel cell pertaining to claims 69 and 70.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

The common inventive idea for all independent claims is a plurality of unit cells that include a fuel layer and an air layer that sandwich an electrolyte layer that is connected to a tank via a fuel supply member.

The following claim(s) are generic: **63 and 75.**

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Yonetsu et al (USPAT 6,506,513) teaches a fuel cell with an electrolyte membrane sandwiched between a fuel electrode and an oxidant (air) electrode. A fuel tank is attached to this fuel cell and utilizes capillary action to introduce fuel to the unit cell. Figure 14 shows a plurality of unit cells (2) in the system.

Kinkellar et al (JP 2003/109633) teaches a fuel supply tank being attached to a fuel cell [Paragraph 16-17]. The flow can be limited by fiber or porous materials [Paragraph 18].

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
